

BLEED

SAFE MARGIN

BOOKMARK PRINTING

Finished product Size : 2" wide by 6" high

BLEED - Your file needs to include a 0.5" bleed necessary for production. Bleed is printing that goes beyond the edge of the sheet after trimming. If a bleed is not included in document setup, there is a good chance that there will be a gap between the edge of the printed area and the cut line. This happens because there is a tolerance when cutting the printed piece. More information on bleeds can be found on our website: www.firstpressprint.com

SAFE MARGIN - Your file needs to include a 0.125" safe margin necessary for production. Safe margin is the area around the edge of the sheet. If the safe margin is not included in document setup, there is a chance that the art close to the edge will get cut off due to machine shift during cutting. This happens website: www.firstpressprint.com
